Derivatives Use Report

- Summary
- Dashboard

June 30, 2015

Prepared By Enterprise Risk Management
Introduction
As determined by the University's Derivatives Use Policy (The Policy) which was approved by the Board of Trustees in July 2010 and updated November 2014, the University’s exposure to an individual counterparty is measured by the Net Termination Exposure (NTE). The Prairieland Energy, Inc. (PEI) Board of Directors approved a PEI-specific derivatives use policy at their October 20, 2014 meeting (The PEI Policy). The PEI Policy is similar to the University policy, but also provides requirements for physical delivery transactions (which apply to the PEI forward purchase contracts). This report provides information on the University’s financial position and potential obligations should there be an early termination of any or all of its existing financial and physical derivative transactions, including positions held by PEI. This is a snapshot of counterparty exposure, only as it relates to derivatives.

Counterparty Financial Health
The Policy requires regular due diligence reviews of the financial strength of University/PEI counterparties. It is the responsibility of the departments that originate each hedging transaction to review the related counterparties regularly in compliance with §12 of the Policy.

Bond credit ratings are used as a proxy for counterparty financial strength. The Policy requires an A-/A3 rating to qualify as a counterparty. The financial institutions (JPMorgan Chase Bank, Loop Financial Products, and Morgan Stanley) meet this requirement. Deutsche Bank however, credit support provider for Loop Financial Products I LLC does have a split rating of BBB+/A3. The Capital Financing office should continue to monitor the financial condition and outlook of their counterparties.

The PEI Policy requires an A-/A3 rating to qualify for financial transactions and a BBB-/Baa3 or BB+/Ba1 with LOC for physical delivery transactions. The energy companies all meet the PEI Policy qualifying credit rating for physical delivery transactions. PEI should continue to monitor the financial condition and outlook of their counterparties.

University Total NTE
The combined current notional value of these derivative agreements is $202.93 million. Should there be immediate termination of all agreements, the combined NTE for all outstanding agreements is a negative $23.93 million, unfavorable to the University. The obligation is mainly due to the MTM on the interest rate swaps, which is in line with the current market environment. The overall immediate risk of termination is low since the counterparties have no ability to terminate these transactions unilaterally unless certain triggers are met (see Financial Hedging NTE).

Financial Hedging NTE (Interest Rate Swaps)
The total NTE of all interest rate swaps is a negative $20.6 million, which would be an obligation for the University to each of the swap counterparties. The immediate risk of all swaps terminating is low since the counterparties cannot unilaterally terminate these contracts unless certain triggers are met, including: (i) a University default, or (ii) the long-term rating on the University's bonds is withdrawn, suspended or reduced below BBB+/Baa1 on the COPs 2004 and UIC SC 2008 and reduced below BBB/Baa2 on the HSFS 2008 bonds.

Physical Hedging NTE (Energy Commodity Transactions)
The total NTE of all physical energy hedges is a negative $3.33 million, unfavorable to PEI/The University. If the agreements were terminated as of June 30, 2015 PEI would have an obligation to all counterparties.

Counterparty Concentration
Morgan Stanley, with a total notional value of $124.32 million, exceeds the 50% limit with 61% of the current notional total of $202.93 million. The University has two interest rate swaps with this counterparty; both predate The Policy and are coincident with related bond issues. Future use of Morgan Stanley as a hedging counterparty would require approval by the VP/CFO as an exception to The Policy.
Material Events
On June 9, 2015, both Deutsche Bank, credit support provider for Loop Financial Products I LLC and Barclays Bank PLC, credit support provider for NRG Power Marketing, LLC, received rating downgrades by S&P from A to BBB+, and from A to A- respectively.

Summary of Collateral Posted by the University (Thresholds)
With respect to the University, the threshold requirement in all of the interest rate swap agreements is infinite, which means the University is never required to post collateral. Threshold requirements are not addressed in the energy forward purchases contracts, except for Shell and TransAlta which are $10 million each, the same as the University guarantee.

The University does provide guaranty agreements to PEI's energy commodity vendors including $35 million with Sequent, $10 million each with Shell, TransAlta, and BP Canada Energy Marketing Corp., $1 million with NRG, and an unlimited agreement with Exelon. The University also provided a $2 million guarantee to PJM Interconnection for physical procurement at UIC but this is unrelated to physical or financial hedging.

Summary of Collateral Held by the University (Thresholds)
The collateral requirements for counterparties on the interest rate swaps are more risk tolerant than The Policy (see table below). All of the swap agreements were approved by the Board of Trustees and executed prior to The Policy, so this is noted as a predated-exception on the Dashboard report.

The contracts with Sequent, Exelon, BP, and NRG do not address collateral thresholds with bond rating triggers. Sequent, Exelon, and BP provide recourse through Credit or Adequate Assurances provisions if reasonable grounds exist regarding unsatisfactory creditworthiness or performance. It is incumbent upon PEI to request Performance Assurance if a rating change triggers the Policy collateral requirements. This provision allows PEI to be proactive, and not necessarily wait for a downgrade event before requesting Performance Assurance. NRG has provided an LOC. The Shell and TransAlta contracts provide bond rating triggered collateral thresholds in line with The PEI Policy, however, not to exceed the parental company guarantee. The only collateral reported to be held by the University is the letter of credit from Barclays Bank for $250,000 to back the forward purchase transaction with NRG Power Marketing, LLC which expires on 6/30/15.
